Healthcare facilities are excepted.  **It is common practice to show rated output capacity on the equipment schedule. Sensible cooling output comes from specification sheet tables.  **If equipment is heating only, leave cooling output and load blank. If equipment is cooling only, leave heating output and load blank.  **Authority Having Jurisdiction may ask for load calculations used for compliance per 140.4(b) and 170.2(c).  **Dry System Equipment Efficiency (other than Package Terminal Air Conditioners (PTAC) and Package Terminal Heat Pumps (PTHP), DX-DOAS and Dual Fuel Heat Pumps)  **O1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

# Light-Duty Commercial Ultra Low NOx Power Direct Vent Gas Water Heater

The FVIR Eco-Defender Safety System® Models Feature:

■ Ultra Low NOx Burner with Primary and Secondary Air Distribution Devices—Ensures proper air to gas ratio for reduction of NOx generated by the combustion process.

■ Closed Combustion Venting System—Power Direct Vent closed combustion system utilizes external air for combustion and exhausts directly to the outside through a separate two-pipe system. The equivalent feet of intake venting cannot be greater than the equivalent feet of exhaust venting.

■ Bradford White ICON System®—Intelligent gas control with spark to pilot ignition system eliminates the constant burning pilot. This results in savings of pilot gas during standby periods (120 VAC).

Enhanced Performance—Proprietary algorithms provide enhanced First Hour Rating and tighter temperature differential.
 Advanced Temperature Control System—Microprocessor constantly monitors and controls burner operation to maintain consistent and accurate water temperature levels.

start-up and provides ten different diagnostic codes to assist in troubleshooting.

- Pilot On Indication—Flashing green LED provides positive indication that pilot is on.

- Separate Immersed Thermowell—High-strength advanced polymer composite thermowell provides isolation between electric temperature sensor and surrounding

- Intelligent Diagnostics—An exclusive green LED light prompts the installer during

water. No need to drain the tank when removing gas valve.

Cast Aluminum Air Intake Boot—A cast molded air intake boot design provides

exceptional durability during installation and operation.
 Flammable Vapor Sensor—Electronic sensor prevents burner operation if flammable vapors are detected. The sensor will also prevent operation if there is ongoing flammable vapors burning inside the combustion chamber.

■ Factory-Installed Hydrojet® Total Performance System—Sediment reducing device that also increases first hour rating of hot water while minimizing temperature build-up in tank.

■ Vitraglas® Lining—An exclusively engineered enamel formula that provides superior tank protection from the highly corrosive effects of hot water. This formula (Vitraglas®) is fused to the steel surface by firing at a temperature of over 1600°F (871°C).

Optional Concentric Vent Kit Termination—Concentric termination fitting provides for only one exit opening through a wall or roof. (Subtract 10ft. (3m) for intake pipe and 10ft. (3m) for exhaust pipe when calculating total vent length.)

Horizontal and Vertical Venting—PVC, ABS, or CPVC (Maximum equivalent vent length for each pipe on reverse side).
 Insulation System—2" (51mm) Non-CFC foam insulation covers the sides and top of the

■ Insulation System—2" (51mm) Non-CFC foam insulation covers the sides and top of the tank, reducing heat loss. This results in less energy consumption, improved efficiencies, and jacket rigidity.

■ Water Connections—3/4" (19mm) NPT factory-installed true dielectric fittings.
■ Side Connections—3/4" (19mm) NPT tappings allow easy connections for space heating applications (Potable water only).

■ Factory-Installed Heat Traps—Design incorporates a flexible disk that reduces heat loss in piping and eliminates the potential for noise generation.

Protective Magnesium Anode Rod.T&P Relief Valve—Installed.

Low Restrictive Brass Drain Valve—Durable tamper proof design.

Low Restrictive Brass Drain Valve—Durable tamper proof design.
 Complies with the latest Ultra Low NOx requirement (10 ng/J NOx limit).
